

GLOBAL RELAY EXTRACTOR FOR EV: STREAMLINING & ACCELERATING ENTERPRISE VAULT™ DATA MIGRATION

Global Relay has developed a scalable, high-speed extraction tool for migrating Veritas Enterprise Vault legacy data to Global Relay's unified and private cloud – no third-party service providers or products required.

Global Relay Extractor for EV (GRX) natively migrates petabytes of on-premise Enterprise Vault data, including items in Microsoft Exchange user and journal mailboxes, in Domino

mail files and journal databases, and SMTP messages from other messaging servers.

GRX gives firms complete control over the data they extract, and will meet their extraction requirements no matter their Archive's size. Firms can run GRX in parallel with their Enterprise Vault environment, with zero downtime for their users.

BENEFITS

COST EFFICIENCY

GRX is installed directly in a firm's Veritas environment, eliminating costly intermediary services. Global Relay's solution requires minimal hardware and IT resources, further increasing the cost benefits of choosing GRX.

CLEAN, COMPREHENSIVE EXTRACTION

GRX extracts Enterprise Vault legacy data and migrates it into Global Relay Archive, with critical metadata preserved, indexed, and serialized. GRX uses automated matching to identify and de-duplicate data.

EASY RETRIEVAL & SUPERVISION

Enterprise Vault data imported into Global Relay Archive is easy to search, access, and retrieve. Global Relay provides a full suite of supervision, eDiscovery, legal hold, and analytics tools to ensure regulatory compliance and prevent risk exposure.

SECURITY & RELIABILITY

Locally installed, GRX does not enable remote connections to a user-firm's network. Neither does it modify Enterprise Vault data, ensuring no source data loss. Global Relay's standard security procedure protects data using AES-256 encryption.

CLEAN CHAIN OF CUSTODY

To ensure a clean, defensible chain of custody, GRX provides various reporting tools before, during, and after extraction. At any given time, firms know specifically what data will be – and has been – extracted.

COMPLETE CONTROL

GRX provides firms with full control over the data extraction process – including selecting data for extraction, exporting native messages with journal envelope information intact, and pausing extractions when necessary.

DEDICATED SUPPORT

Global Relay assigns dedicated Provisioning and Data Services technicians to assist firms with GRX installation and use. After their data has been migrated into the Archive, firms can depend on Global Relay's 24x7x365 customer support.
