

CONNECT, COLLECT AND CONVERT

Connect, Collect and Convert with Global Relay's Delivery Service. Global Relay connects to your data sources and captures your information across all your communication channels. Your data is converted into a searchable and easy-to-analyze format that can be sent to your Global Relay archive or a destination of your choice - a separate archive, application, or data lake.

Global Relay Archive is a world-class compliance archiving and monitoring solution that seamlessly integrates with email and other electronic messaging systems — delivering superior message search, retrieval and review capabilities. With this service, Global Relay handles the technically-complicated process of collecting and converting messages from various communication platforms and then delivers the messages to an SMTP destination of your choice.

For organizations that require their data to be delivered externally, you can now use the Global Relay External Delivery via SMTP service to (1) collect, (2) convert, and (3) deliver your data.

- 

HIGHLY SECURE CONNECTION
Messages are delivered using TLS 1.2 transport encryption.
- 

STATE-OF-THE-ART DATA CAPTURING TECHNOLOGY
Supporting over 60+ data types, the service rests on tried-and-true technology, proven to be reliable and secure.
